Specifications for Summary Document

This document should have 3 sections:

1.Meeting the specifications: Describe how your site meets the assignment specifications, particularly what interactive functionality (i.e. jQuery-UI, plugins, source of Ajax requests) you have implemented. This can be a series of bullet points, or one paragraph.

The website meets the assignment specifications by having interactive functionality such as jQuery-UI, plugins and source of Ajax requests. I have implemented 2 jQuery plugins in my website which are on the Product Details page. First one is the zoom functionality to zoom the main image. The second jQuery plugins are also in the Product Details page which is the widget to scroll the images. jQuery-UI widget is added on the contact us page in the preferred contact time field, the word comes auto-populated If you type m morning comes and it's same for morning afternoon evening and night. Lastly, the purposes of the AjAX implementations in for the user to press on the Get Discount Button and the price on the item will change. The price is going to automatically drop down and show the user the new price for the item. This implementation is used as a coupon. In the Product Details Page, the AJAX function has been added. There is a Get Discount Bottom implemented which can reduce the price of the sale price. I added the products .json file. ***function getbulkPrice() {
$.get("https://api.myjson.com/bins/1dpsfm")*** In the main.js file API
https://api.myjson.com/bins/1dpsfm

2.Summarize the feedback you received in your critiques and how you updated your website in response. This can be a set of bullet points or a paragraph or two. If you did not update your website, include your justifications.

The feedback I received from critiques was extremely important and I made sure that I changed or implemented the suggestions they made. One of the feedbacks I got was to change the color combination, so I did change that. The second thing which was recommended was to increase the font size, so I did change the font size. There were no major suggestions from the critiques, the ones which were addressed I fixed or implemented. I worked closely with the client, so they made sure the website was meeting their standards.

3. A paragraph on how well you think your website will meet the needs of your stakeholders/clients, and your future with the website.

I think this website that I made from scratch fulfills all the needs of my client so far. I have always worked closely with the client and have been getting approvals from them throughout the progress of the website. My main goal was to satisfy my client and I think I have achieved it since they are extremely liking their new website. The future plan for this website is that it needs a backend. I am learning backend coding by my own and will be implementing in near future.
